MULTI-LAYER DISPLAY DEVICE

Abstract:

Abstract of JP2002271819

PROBLEM TO BE SOLVED: To provide a display device that can display a multi-layered image. SOLUTION: The display device comprises multi-levels of screens, each screen being selectively transparent with the ability to display images. The display device employs a method that can define layers on which an image is displayed on the basis of a sequential time based pixel change in video data. The method can extract depth from two-dimensional video data by using the multi-levels of screens.
